

Tech Project Reference

Project Apollo Phase 1

Project Apollo Phase 1 uses AWS (Amazon Web Services) as its cloud infrastructure. The phase focuses on initial data migration and API development. Key services include Amazon S3 for storage, EC2 for compute, and RDS for the relational database. Phase 1 was completed in Q2 2024 with 99.9% uptime achieved.

Project Apollo Phase 2

Project Apollo Phase 2 migrates the infrastructure to GCP (Google Cloud Platform). This phase introduces machine learning pipelines and BigQuery integration. Key services include Cloud Run for containerized workloads, Vertex AI for model training, and Pub/Sub for event streaming. Phase 2 is scheduled for completion in Q4 2025.

Project Hermes

Project Hermes is an internal developer tooling initiative hosted on Azure. It provides CI/CD pipelines using Azure DevOps and artifact management via Azure Container Registry. The project is maintained by the Platform Engineering team.
